 Tokenizer TextTokenizer CharacterTokenizer WordTokenizer WordTokenizer Correct	1/1 point
 CharacterTokenizer WordTokenizer ✓ Correct That's right! What is the name of the method used to tokenize a list of sentences? tokenize_on_text(sentences) fit_on_texts(sentences) tokenize(sentences) fit_to_text(sentences) fit_to_text(sentences) correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) text_to_sequences(sentences) Correct Correct Correct Correct unknown_token=<token></token> out_of_vocab=<token></token> out_of_vocab=<token></token> 	
 ✓ Correct That's right! What is the name of the method used to tokenize a list of sentences? tokenize_on_text(sentences) fit_on_texts(sentences) tokenize(sentences) fit_to_text(sentences) Occrect Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) text_to_sequences(sentences) ✓ Correct Correct Correct Correct Oov_token=<token> unknown_token=<token></token> out_of_vocab=<token></token> out_of_vocab=<token></token> out_of_vocab=<token></token> </token> 	
 Correct That's right! What is the name of the method used to tokenize a list of sentences? tokenize_on_text(sentences) fit_on_texts(sentences) tokenize(sentences) fit_to_text(sentences) Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) correct Correct Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token></token> unknown_token=<token></token> out_of_vocab=<token></token> 	
That's right! 2. What is the name of the method used to tokenize a list of sentences? \(\) tokenize_on_text(sentences) \(\) tokenize(sentences) \(\) tokenize(sentences) \(\) tokenize(sentences) \(\) correct \(\) Correct \(\) Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? \(\) text_to_tokens(sentences) \(\) texts_to_tokens(sentences) \(\) texts_to_tokens(sentences) \(\) text_to_sequences(sentences) \(\) text_to_sequences(sentences) \(\) correct \(\) Unknown_token= <token> \(\) unknown_token=<token> \(\) unknown_token=<token> \(\) out_of_vocab=<token></token></token></token></token>	
 tokenize_on_texts(sentences) fit_on_texts(sentences) tokenize(sentences) fit_to_text(sentences) Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) ✓ correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token></token> unknown_token=<token></token> out_of_vocab=<token></token> 	
 fit_on_texts(sentences) tokenize(sentences) fit_to_text(sentences) Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token></token> unknown_token=<token></token> out_of_vocab=<token></token> 	ns? 1/1point
 tokenize(sentences) fit_to_text(sentences) Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token> unknown_token=<token></token> out_of_vocab=<token></token> </token>	1/1point
 ∫ fit_to_text(sentences) ✓ Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? ∫ text_to_tokens(sentences) ∫ texts_to_tokens(sentences) ∫ texts_to_sequences(sentences) ∫ text_to_sequences(sentences) ✓ Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? ♠ oov_token=<token></token> ♠ unknown_token=<token></token> ♠ out_of_vocab=<token></token> 	ns? 1/1 point
Correct Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? text_to_tokens(sentences) texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token= <token> unknown_token=<token> out_of_vocab=<token></token></token></token>	ns? 1/1point
Correct! 3. Once you have the corpus tokenized, what's the method used to encode a list of sentences to use those tokens? ○ text_to_tokens(sentences) ○ texts_to_sequences(sentences) ○ text_to_sequences(sentences) ○ correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? ○ oov_token= <token> ○ unknown_token=<token> ○ out_of_vocab=<token></token></token></token>	ns? 1/1point
 ↓ text_to_tokens(sentences) ↓ texts_to_sequences(sentences) ♠ text_to_sequences(sentences) ✔ Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? ♠ oov_token=<token></token> ♠ unknown_token=<token></token> ♠ out_of_vocab=<token></token> 	ns? 1/1 point
 ↓ text_to_tokens(sentences) ↓ texts_to_sequences(sentences) ♠ text_to_sequences(sentences) ✔ Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? ♠ oov_token=<token></token> ♠ unknown_token=<token></token> ♠ out_of_vocab=<token></token> 	ns? 1/1 point
 texts_to_tokens(sentences) texts_to_sequences(sentences) text_to_sequences(sentences) Correct Correct! When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token> unknown_token=<token> out_of_vocab=<token> out_of_vocab=<token> </token></token></token></token> 	
 texts_to_sequences(sentences) text_to_sequences(sentences) Correct Correct! When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token> unknown_token=<token> out_of_vocab=<token> </token></token></token> 	
 text_to_sequences(sentences) Correct Correct! When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token=<token> unknown_token=<token> out_of_vocab=<token> </token></token></token> 	
Correct Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token= <token> unknown_token=<token> out_of_vocab=<token></token></token></token>	
Correct! 4. When initializing the tokenizer, how do you specify a token to use for unknown words? oov_token= <token> unknown_token=<token> out_of_vocab=<token></token></token></token>	
oov_token=<token></token>unknown_token=<token></token>out_of_vocab=<token></token>	
<pre>unknown_token=<token> out_of_vocab=<token></token></token></pre>	1 / 1 point
O out_of_vocab= <token></token>	
O unknown word-cTokons	
O unknown_word= <token></token>	
5. If you don't use a token for out of vocabulary words, what happens at encoding?	1 / 1 point
The word is replaced by the most common token	
The word isn't encoded, and is replaced by a zero in the sequence	
The word isn't encoded, and is skipped in the sequence	
The word isn't encoded, and the sequencing ends	

6.	If you have a number of sequences of different lengths, how do you ensure that they are understood when fed into a neural network?	1 / 1 point
	Use the pad_sequences function from the tensorflow.keras.preprocessing.sequence namespace	
	O Specify the input layer of the Neural Network to expect different sizes with dynamic_length	
	O Process them on the input layer of the Neural Network using the pad_sequences property	
	O Make sure that they are all the same length using the pad_sequences method of the tokenizer	
	○ Correct That's right!	
7.	If you have a number of sequences of different length, and call pad_sequences on them, what's the default result?	1 / 1 point
	They'll get cropped to the length of the shortest sequence	
	O They'll get padded to the length of the longest sequence by adding zeros to the end of shorter ones	
	O Nothing, they'll remain unchanged	
	They'll get padded to the length of the longest sequence by adding zeros to the beginning of shorter ones	
	Correct!	
8.	When padding sequences, if you want the padding to be at the end of the sequence, how do you do it?	1 / 1 point
	O Call the padding method of the pad_sequences object, passing it 'post'	
	O Call the padding method of the pad_sequences object, passing it 'after'	
	O Pass padding='after' to pad_sequences when initializing it	
	Pass padding='post' to pad_sequences when initializing it	
	✓ Correct That's right!
